

Installation of your boot-bag for the MK4/ND/2016 Miata/MX5

1. Open boot/trunk lid & lay straps out as shown in a 'H'. With the MK4/ND/2016 MX5/Miata we suggest the longer strap is placed under the boot lid hinge to help secure it. (as shown)Then lower boot/trunk lid

2. Place the anti-slip matting towards the front of the boot/trunk-lid (i.e. Near to driver. Ensure the boot/trunk lid is clean)

3. Lay the boot-bag on the matting making sure the flap/zip is facing the back of the car the logo should be on the right at the back

4. Then attach the 6 ends of the straps to H shape harness using the ladder-lock buckles ensure all pulled tight (do not over tighten and strain fixing points & ensure H strap is centrally located when tightening sides)

5. Your boot-bag is supplied with 3 straps 2 x 1.8m, 1 x 2.4m these can be cut to suit your car, then use lighter to melt the ends to stop any fraying.

We advise you pull over after the first 5 – 10 Miles to pull straps tight if needed as the contents of bag will settle.

WE WANT TO KNOW WHAT YOU THINK OF BOOT-BAG PLEASE GIVE US FEEDBACK liza@boot-bag.com
